# T1A2 - Portfolio Presentation

Andrew Gregorovic

Design Process Pt. 1

1. Decide on what pages to include in my site.
2. Look at other websites to find some inspiration and ideas.
3. Create wireframes to help understand what is required when starting to write the HTML.
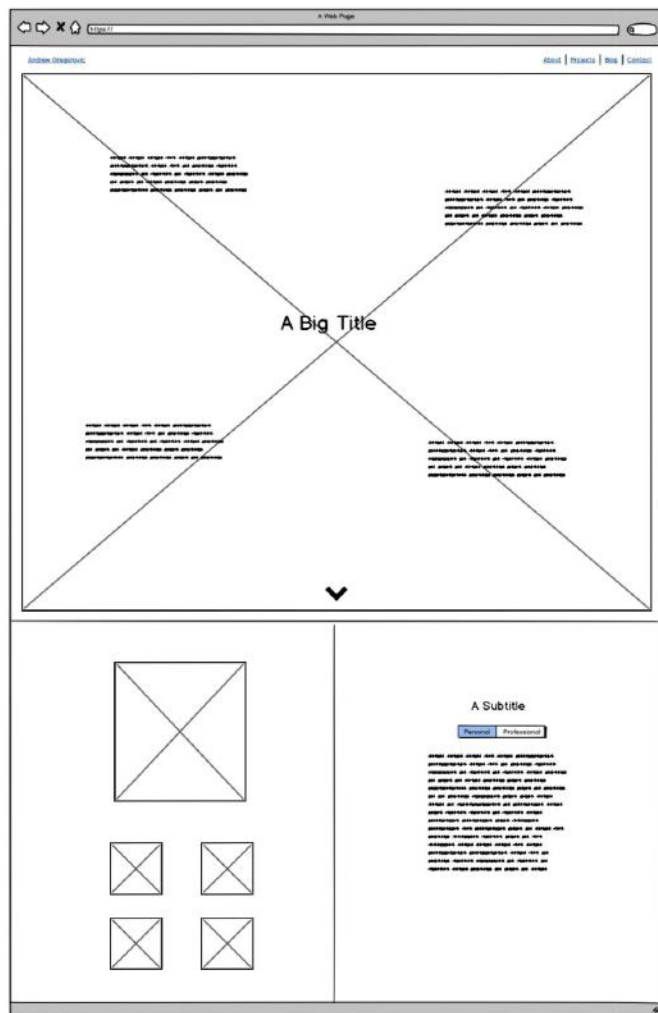

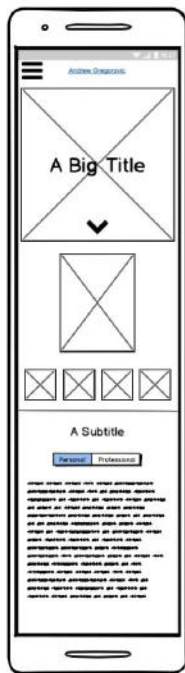

Portfolio Sitemap

Index Page

Components used:
- Images
- Text boxes
- Radio buttons
- Labels
- Button styled links
- Navbar

The browser size navbar simply uses button styled links but the mobile size navbar uses a checkbox and labels to create a collapsible menu.
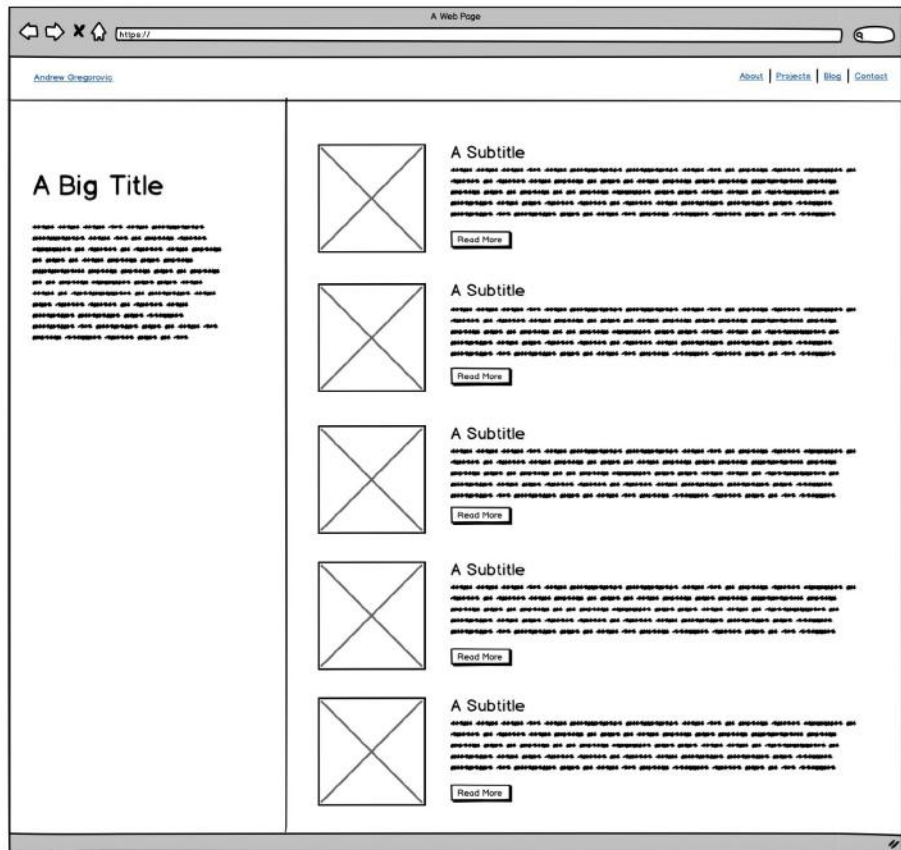

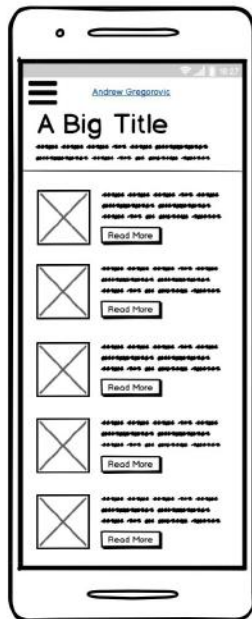

Projects Page

Components used:
- Text box
- Images with either tooltips or overlays to explain what they are
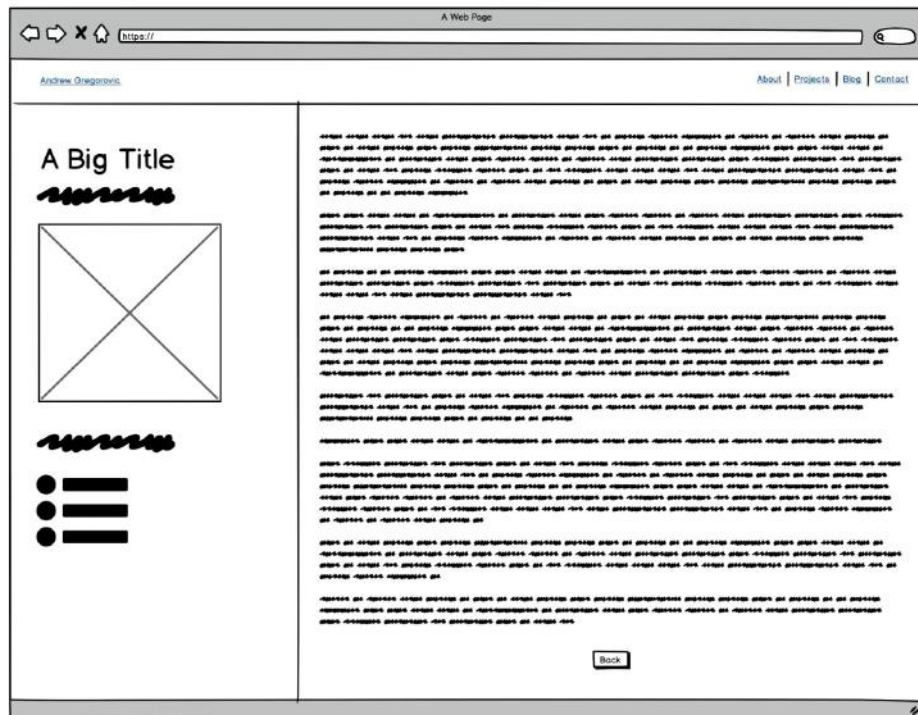

Blog Page

Components used:
- Text boxes
- Images
- Button styled links

Blog Post Pages
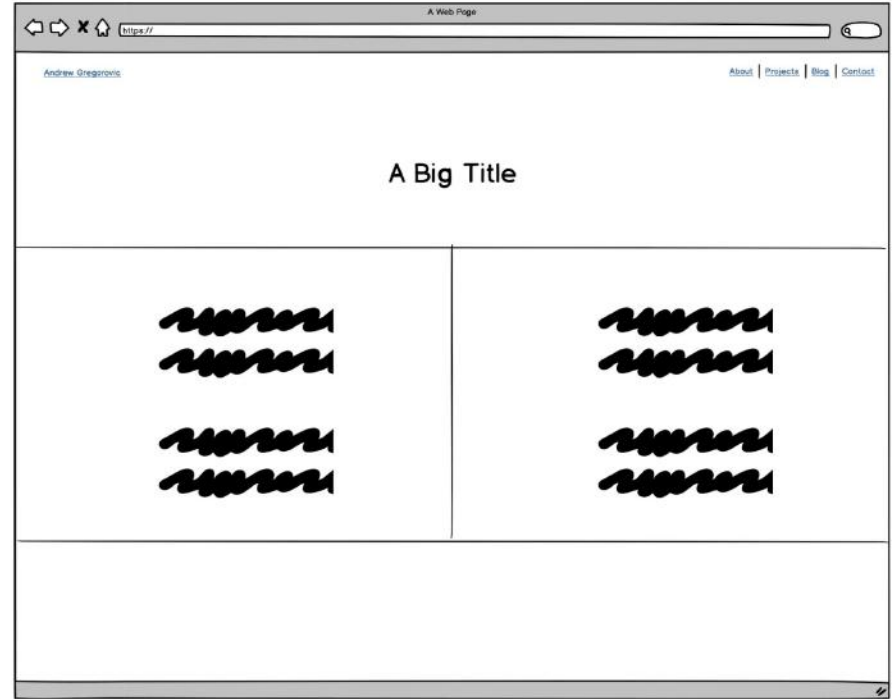

Components used:
- Text boxes
- Images
- Text and button styled links

Contact Page

Components used:
- Text boxes
- Text links

Build Process Pt. 1

1. Write the HTML for each page of the site including placeholder text/images.
2. Style the layout of each page in CSS with responsive design.

Design Process Pt. 2

1. Decide on a theme to base the overall look of the site on.
2. Form a solid idea on how to further style page elements to try and fit that theme as best I can.
3. Pick fonts and colours to use.

Build Process Pt. 2

1. Import the fonts and set colour variables in the CSS.
2. Fully styled the elements on each page to achieve my desired look.
3. Once styled and after placing more appropriate placeholder images, recheck the layout to make sure everything is still positioned properly and scales responsively without any issues.

Challenges during this project

- Getting started!
- Coming up with the design and layout of the pages.
- Deciding on how to style everything to look ok at least.
- Trying to work out how to implement certain parts of my initial design ideas.
- Getting sidetracked with cool additional features, some of which I added and others I didn't.

- Forgetting to keep a 'mobile first' mindset at the beginning when I started doing the CSS for the page layouts.
